

# NATURAL LIGHT

## Full Spectrum Daylight Bulb

STIMULATES  
PLANT  
GROWTH

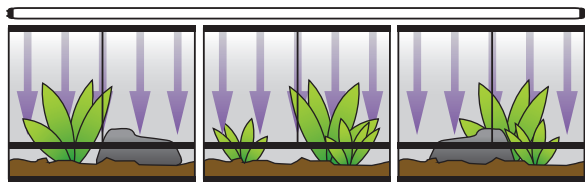

- Ideal daylight spectrum for all reptiles, amphibians, invertebrates and plants
- Stimulates appetite, activity and reproductive behavior through UVA radiation
- Improves the animal's perception of its environment
- Stimulates plant growth

The Exo Terra® Natural Light is a full spectrum daylight bulb, recommended as general light source for all terrarium types. As a result of the vivid wavelengths of light provided by the Natural Light, reptiles will experience and perceive colours from their environment more naturally. The Exo Terra® Natural Light will help to improve the living conditions and physiological wellbeing of your reptiles.

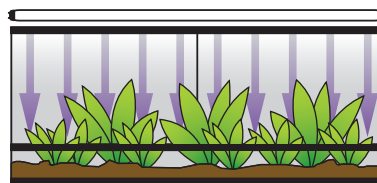

The specific wavelengths make this bulb suitable for planted terrariums and for animals with lower UV requirements, such as snakes, amphibians (frogs, toads and salamanders) and nocturnal animals. Combine this full spectrum daylight bulb with Exo Terra®'s Reptile UVB100, Reptile UVB150 or Reptile UVB200 (depending on the reptile's UV requirements) to intensify natural sunlight conditions.

The longer sizes can be placed on multiple terrariums.

The longer sizes can be placed on multiple terrariums.

Linear Lighting - even distribution of light for optimal plant growth
